Godowski PJ; Goddard A, Wood WI; Gerritsen ME, Watanabe CK, New antibody that binds to a secreted protein, designated as PRO polypeptide, useful as pharmaceuticals, diagnostics, biosensors

Disclosure; Fig 5; 235pp; English.

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information is typically governed by information is often transmitted by secreted polypetides (for example mitogenic is often transmitted by secreted polypetides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences enoved them. The novel provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or sequence is a cDNA sequence which encodes a human PRO protein of the

The polymore around an early an appropriate are useful in molecular biology including uses as hybridisation probes for cond library to isolate the full-length PRO cDNA or to isolate other cDNAs, in the generation of antisense RNA and DNA, for preparing PRO polypeptides, for generating transgenic animals or knockout animals which are useful in the development and screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The proteins of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The proteins of therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists) or prevent the effect of the PRO polypeptide (agonists) or prevent the effect of the PRO collypeptide (antagonists) or prevent the effect of the PRO collypeptide (antagonists) or prevent the effect of the PRO collypeptide (antagonists) or prevent the effect of the PRO collypeptide (antagonists) or prevent the effect of the PRO collypeptide (antagonists) or necenting the expression in specific calls in success or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be evention of the protein of the entity of the entity of the protein of the protein of the entity of the entity of the protein of the protein of the entity of differentiation (e.g. psoriated with abnormal keratinory among a sociated with abnormal keratinocyte differentiation (e.g. psoriated with abnormal keratinocyte differentiation (e.g. psoriated), parkinson's disease, Alzheimer's diseases, anyotrophic lateral sclerosis (ALS), neuropathies and additionally, disease related to uncontrolled cell growth, e.g. cancer. PRO polypeptides also serves as tumour specific antigens which may be exploited as therapeutic targets for anti-tumour drugs, and are also employed therapeutically in vivo for lessening the effects of viral infection. The PRO polypeptides can be also used in assays to determine if it has a role in neurodegenerative diseases or their reversal, as an antithrombotic agent with reduced risk for haemorrhage as compared with hepatin, in treating other PRO-associated disorders, in modulating the commercial bleeding angiogenesis, and may also have an effect on kidney tissue. PRO polypeptides and their portions affect the expression of man also have a negletil in a modulating angiogenesis. and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. PRO polypeptides are also useful for treating disorders associated with the preservation and maintenance invention discloses isolated PRO secreted/transmembrane polypeptides Claim 2; SEQ ID NO 200; 479pp; English.

```
The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are used for treating diseases related to growth or survival of nerve cells such as Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis (ALS) and neuropathies, diseases related to uncontrolled cell growth such as cancer, viral infections, Usher's syndrome, paemorrhage, enterocolitis, cancer, viral infections, usher's syndrome, pastinal ulceration, congenital microvillus atrophy, skin diseases such as psoriasis and epithelial microvillus atrophy, skin diseases such as psoriasis and epithelial cancers, endometrial bleeding, angiogenesis, ischaemic conditions, atherosclerosis, cardiac injury, infertility, birth defects, premature ging, AIDS, stroke and diabetic complications. The polynucleotides are also useful in chromosome and gene mapping. This sequence represents a human PRO polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Botstein D, Desnoyers L, Eaton DL, Ferrara N;
